

Magic-Light

Thank you for choosing our Magic-Light.

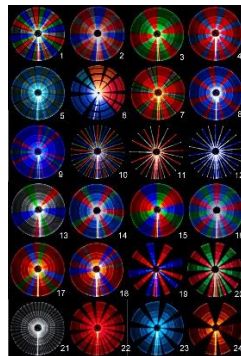

What does the Magic-Light offer?

The Magic-Light is the first LP flashlight to offer a colored touch display which shows the current status. There are also 48 program slots, 28 of which are interactive.

The 20 ready-made color sequences can be used at any time by simply pressing a button and without any further programming steps. (also during a paint pass!)

A USB-C interface for later updates is build in.

Sequences of the Magic-Light:

Level 1

Level 2

Level 3

Level 4

Level 5

Level 6

Function of the Magic-Light:

1. The Magic-Light is switched on with the rear end cap switch and the display now shows „Manuell“

In this status, by pressing the colored buttons, the respective color turned on.

Red and green together make orange,
blue and green make cyan aso.

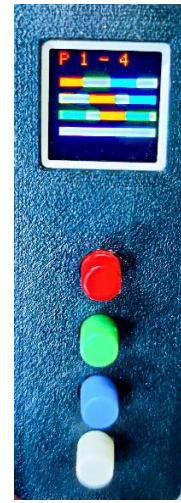

- Pressing the display shows the first Level with programs 1-4.

Program 1 is called up with the red button, with the green No. 2, with the blue No. 3, with the white No. 4.

The Magic-Light now plays the displayed color sequence in an endless loop. The respective program is ended by pressing display.

In order to change the programs it is sufficient to press a different color key. If one program is working, the display shows „Stop“ all programs are ending by pressing the display.

- Each time you press the display again, the Magic-Light jumps one level. The associated programs started with the individual colored buttons. Each program ended by pressing the display.

- Arriving at Level 6, the Magic-Light offers to jump back to „Manuell“ or to make a color selection for the Strobes by pressing the display. With the Buttons 1-4 red to white it goes back to „Manuell“

- One more pressing the display the Magic-Light offers 7 colors to use with the Strobes.

The built-in USB-C interface CANNOT be used to charge the battery!
